Yoshua Carrera Vargas

(203) 214-8763 | yoshua.carrera24@gmail.com | https://yoshua-carrera.netlify.app

SUMMARY

Results-driven Senior Software Developer with a strong track record of creative problem-solving and cross-functional team communication. Self-motivated and always passionate about learning the latest technology in the industry.

KEY SKILLS

- 5+ years of development experience in front-end user interface web applications.
- Extensive knowledge in the latest Angular features such as routing, directives, route guards, lazy loading, Inter-component data transfers, dependency injection, data pipes, interceptors, http module operations, reactive and template driven forms.
- Database experience includes writing stored procedures, triggers, script integration for data validation, knowledge of data warehousing techniques, and building SSIS pipelines.
- Expertise in machine learning with Python using several frameworks such as tensor flow OpenCV, Scikit, Numpy/Pandas, Keras. Additionally, proficiency in predictive algorithms such as neural networks, SVM, Logit, Random forests, Decision trees, Association rules, and many others.
- Mentoring junior engineers to create scalable quality code.

TECHNOLOGIES

- **Languages:** TypeScript/JavaScript, Python, SQL/PLSQL/MQL, GO, R Language, C++
- **Enterprise/Web Technologies:** Angular (main) / React, Ionic/Cordoba | Ionic/Capacitor, GraphQL, RX/NGRX, Django, HTML5, JSON, NG Material, Ng Bootstrap, NPM/NVM, Passport, Google OAuth2, JWT, Request, Async, Browserify, Chrome dev tools, AWS: EC2, Elastic Beanstalk, CLI, Balance loaders, elastic IP
- **Database services/Technologies:** MongoDB, Mongo Atlas, Oracle 12c, Oracle 10g, MySQL, MS SQL server, AWS Athena, Amazon RDS, Visual studio SSIS pipelines/Warehouses
- **Testing & Debugging:** Karma, Jasmine, Protractor, Cucumber, Postman, Insomnia, Proxyman
- **Tools:** Github, Gitlab, Apollo Studios, TestRail, Jira, Chalk, Zeplin, Trello

ADDITIONAL SKILLS

Scrum Agile | Troubleshooting | Collaboration | Performance Tools | Time/Space Optimization | Architecture Problem-Solving | Leadership | Strategic Planning | Mentoring | Technical Process Improvement | Communication

EXPERIENCE

Charter Communications | Senior Software Developer (IV) | Denver, CO — *May 2022 - Present*

Spectrum and My Spectrum App (MSA) are single page applications developed in Angular and distributed to mobile using Ionic/Capacitor serving over 32 Million users in 41 states. Charter Communications was awarded the "JD Power Award" during May 2024.

- Lead developer of the Service Appointments feature, which served an average of 104K user transactions each month with a 98.16% flow success rate between 5 different types of transactions (both AUTH and UNAUTH). Point of contact between FE and BE communication for changes in schema and GRAPHQL domains.
- Lead developer in the 2024-Q1 Enhanced Scheduling feature and author of the level of effort (LOE) published for that project. This project was built on top of a new GRAPHQL integration which boosted success rated in around 1% during EFT, projected to surpass the quarterly goal.
- Authored, architected, and led the foundational work for the Internet Symptoms troubleshooting feature (~estimated 128K users per month).
- Active member in the architecture team that drafted many of the systems and patterns used across the application, implementing development designs such as: facades, factories and multiple observer systems built around state management using NGRX.

Fairfield University - Chemquest Mobile App | Software Developer | Fairfield, CT — *June 2020 - Dec 2021*
Chemquest is an experimental mobile app designed to offer hand drawn chemical recognition features to the user, by using several machine learning techniques to fine tune the user experience and prediction accuracy.

- Developed frontend of the application using Angular 9, Ionic 3 and Capacitor 2. The entirety of the project was written in Typescript using several bootstrap UI components.
- Participated in the development of the backend engine using Python and Django, along with a cloud deployment on AWS and a MySQL integration to the backend.
- Developed user authentication by using Django's tokenization.
- Managed the deployment of the app on both Apple Appstore and Google Play store for every release (Alpha, Beta, production release).
- Worked as a team lead on a cluster of three other developers who oversaw machine learning research and web development.

Sicobra | Jr. Data Scientist | Quito, Ecuador — *Nov 2018 – Dec 2019*
Sicobra is a loan recovery branch owned by a major bank in Ecuador. It specializes in recovering loans from through phone calls, text messages and in person visits. Daily data intake totaled over 1 million records a day, which were used to predict the score clients based on their probability of loan payback.

- Formed part of the core data science team in charge of building and A/B testing mathematical models to improve effectiveness of the recovery efforts, as well as reporting of results on a daily and monthly basis.
- Developed an algorithm to calculate credit scores based on Montecarlo simulations, the logit model was trained on demographic and behavioral data with over 96% accuracy.

Cuponcity | Software Developer | Quito, Ecuador — *Aug 2017 - Oct 2018*
Cuponcity delivers an E-commerce all-in-one solution to connect users with a wide variety of businesses from all around Ecuador through offering time bound offers in the form of coupons. The platform allows users to create accounts and purchase products and services organized by category.

- Involved in the front-end development of the web application using Angular, angular directives, two-way binding, ES6, reusable components.
- Created several user-oriented interfaces using angular material and bootstrap boosting the overall experience on the website. Pagination and carousels were some of the features added using the mentioned libraries.
- Participated in the implementation of user authentication via tokenization.

ADDITIONAL PROJECTS

Black Cat - Cat Manga | Remote — *April 2020 - June 2021*
Community-driven development project. Cat Manga is a startup with the aim to provide a platform where readers could access several Japanese reading materials while providing a fluid and modern user experience.

- Involved in the front-end development of the web application using React 16, typescript, HTML, SCSS, and bootstrap.
- Constant engagement with the backend team to integrate the Mongo-powered backend into the frontend as well as helping provide third-party bot developers tools to make use of said APIs.
- Formed part of a team of fifteen developers to perform maintenance to the webpage as well as releasing community-driven feature implementation on a weekly basis.

EDUCATION

- **Fairfield University** | **Master of Science, Applied Data Science** | Fairfield, CT | *2022*
- **Universidad de las Américas** | **Bachelor of Science, Math | Bachelor of Science, Finance** | *2018*
